

Indian Institute of Technology, Madras

NAME: RAVISH KUMAR

ROLL NO: CS23M055

EDUCATION

| PROGRAM | INSTITUTION | %/CGPA | Passing Year |
|--|--|---------|--------------|
| M.Tech, Computer Science Engineering 🔗 | Indian Institute of Technology, Madras | 8.12/10 | 2025 |
| Bachelors, Computer Science Engineering 🔗 | Indian Institute of Information Technology Sricity, Chittoor | 7.71/10 | 2021 |
| XII 🔗 | Radiant International School, Patna | 82.2% | 2017 |
| X 🔗 | Radiant International School, Patna | 10/10 | 2015 |

SCHOLASTIC ACHIEVEMENTS

- AIR-1517 GATE CSE 2023 🔗

RELEVANT COURSEWORK AND SKILLS 🔗

- Data Structures and Algorithm
- DBMS
- Enterprise Application Development
- GPU
- Deep Learning
- PRML
- Technologies:**C++, Python, CUDA, JavaScript, MongoDB, AWS RDS, Docker, HTML, CSS, Nginx, Travis Ci
- Frameworks & Libraries:** Numpy, Pandas, PyTorch, ReactJS, React Native, ExpressJS, NodeJS, Flask
- Practices & Project Management:**Object Oriented Programming, Github

PROFESSIONAL EXPERIENCE

- Senior Quality Engineer - L&T Infotech** 🔗 July 2021 - July 2022
- Worked in performance testing domain
 - Hands on experience on LoadRunner and Jmeter

INTERNSHIPS

- Fidelity Investments** 🔗 May 2024 - July 2024
- Worked on various model calibration methods like spline calibration, isotonic regression and platts calibration
- NCIIPC - National Critical Information Infrastructure Protection Centre** 🔗 May 2020 - July 2020
- Worked on ELK stack
 - Hands on experience of Security Onion

PROJECTS

- Game Simulation using CUDA** 🔗 Apr 2024 - Apr 2024
- Multiple tanks on an MxN grid with health points
 - Tanks attack enemy tanks algorithmically based on rounds
 - A tank loses 1 health point per hit; the attacking tank's score increases by 1
 - There is a possibility of another tanks in between a tank and its enemy for the current round
 - Tanks with 0 or fewer health points can't participate in further rounds.
 - Battle continues until only one tank remains.
 - Scores are calculated at the end of each round.
 - GPU parallelization with a TxT grid is used for efficient simulation, where T is the number of tanks.
- Legal Assistant** 🔗 Feb 2020 - Dec 2020
- A legal document retrieval system
 - Made an intuitive UI using ReactJS and REST API using Flask
 - Made the production grade software using Docker-compose, Nginx, uWSGI
- Cloud Computing Project** 🔗 Feb 2020 - Apr 2020
- Made a static event planner website using ReactJS, NodeJS
 - Containerized the complete project using docker and built docker images
 - Routed the request through nginx server
 - Used AWS Beanstalk to host the website
 - Used AWS RDS as the database
 - Got hands on various cloud services such as AWS VPC, AWS S3
- News Room** 🔗 Sept 2019 - Dec 2019
- This is a news website
 - Any user can post their content or news
 - Worked on complete backend development

- Made REST API using NodeJS

Digital College [↗](#)

Sept 2018 - Dec 2018

- This is a web app like google classroom
- Addition to it any college can create a club
- Faculty can conduct various online quizzes
- Worked on user authentication and validation
- Worked on the frontend using HTML, Materialize CSS, Bootstrap, Django REST API

OTHER HIGHLIGHTS

- Language Proficiency: English, Hindi
- Completed the course of CEH v10 by EC-Council in 2020 [↗](#)
- Leetcode Profile [↗](#)
- Github Profile [↗](#)
